

# Creo Advisors

A Market, Competitive, and Strategic Analysis

PE-Focused Boutique Strategy & Value-Creation Consulting

ENT 105 Research Synthesis — fan-out web search, adversarial verification

31 May 2026 — marketing & GTM intelligence added 2 June 2026

**One-paragraph thesis.** Creo Advisors is a Boston-area (Pembroke, MA) boutique strategy and value-creation advisory firm, founded in 2019 by Rich Vitaro, serving private-equity sponsors, boards, and PE-backed portfolio companies across four service lines (Strategy, Growth, Operations/Supply Chain, Human Capital). It plays in a crowded and consolidating value-creation market against operations-specialist boutiques (Maine Pointe, TBM Consulting), PE/strategy specialists (Grant Thornton | Stax), and the dominant incumbent (Bain). The market is being pulled hard toward operations and *execution*, which structurally favors Creo's positioning. Creo's current strength is the classic boutique foundation — a top-tier founder reputation and sponsor relationships — and its largest opportunity is to build the durable assets (a sharp niche, a named methodology, provable outcomes, and a running demand engine) that turn a strong founder's shop into a defensible boutique *firm*. That opportunity is the foundation of the marketing plan.

---

## 1 Executive Summary

**What Creo is.** A small, founder-driven boutique (est. 2019) that sells *strategy-through-execution* to PE-backed middle-market companies. Publicly verifiable facts cover its service model, target market, and founder; its headcount, revenue, and client roster are not publicly detailed (the team page moved from `/leadership` to `/team`), and are best confirmed at the Discovery Meeting.

**Who it competes with.** Three tiers: (1) operations-specialist boutiques that overlap Creo’s exact scope (Maine Pointe, TBM); (2) PE/strategy specialists (Grant Thornton | Stax — notably

also Boston-based); and (3) the Bain-tier incumbents that work with most large PE firms and set the benchmark every boutique positions against.

**How the industry wins work.** Consulting is a *credence good*: buyers cannot verify quality even after delivery, so purchases run on experience-based trust, sponsor relationships, repeat engagements, and referral networks rather than price or measurable output.

**What wins right now.** Demand is shifting decisively from financial engineering to *operational improvement and execution*. Operational improvement is the single most-cited value lever; a large majority of PE respondents expect it to grow further; and most value-creation failures trace to controllable execution gaps. Implementation capability is therefore the defining differentiator — though it is now the industry-standard *claim*, which makes *provable* execution, not the claim itself, the real edge.

**Strategic read.** Creo’s defensible asset today is founder reputation — the classic boutique foundation. The opportunity is to harden it into a durable bundle (niche focus, a named methodology, quantified proof, and a repeatable demand engine). Several of Creo’s differentiators are asserted on the site but not yet *publicly substantiated*; surfacing real proof points is one of the clearest marketing opportunities.

## 2 Firm Profile: Who Is Creo Advisors?

### 2.1 Overview [High confidence]

Creo Advisors is a boutique strategy and value-creation advisory firm founded in **2019**. Its corporate office is at 125 Church St, Pembroke, MA 02359 — roughly 30 miles south of Boston — so the common “Boston-based” descriptor is regional rather than literal. The firm explicitly partners with “*ambitious Boards, PE Firms, and Management teams*” and frames its mission as helping clients “*create sustainable value by identifying, focusing, and executing on key levers.*” Its current marketing targets “ambitious management teams and Private Equity backed portfolio companies.”

### 2.2 Service lines [High confidence]

Creo organizes its offering into four practice areas:

| Practice             | Representative offerings                                                               |
|----------------------|----------------------------------------------------------------------------------------|
| <b>Strategy</b>      | Strategic planning & prioritization; transformation; M&A support                       |
| <b>Growth</b>        | Go-to-market strategy & analytics; pricing & promotions; sales-force effectiveness     |
| <b>Operations</b>    | SIOP & inventory planning; operations optimization; distribution & logistics           |
| <b>Human Capital</b> | Workforce planning; “peak performance”; leadership development / organizational design |

This four-lever span (strategy → commercial growth → operations → talent) is deliberately broad for a boutique and is designed to map onto the full set of EBITDA-improvement levers a PE sponsor cares about across a hold period.

## 2.3 Leadership and founder [High confidence]

The firm was founded and is led by **Rich Vitaro** (titled “Founder/Managing Director,” and “Founding Partner” in press materials). His background spans well-known turnaround and strategy houses — **AlixPartners, Booz Allen, Parthenon, and BRG**. Creo’s own bio states he “*successfully led ~200 engagements for ~100 clients*” and is “*recognized as a trusted partner by Senior Management, Boards and Private Equity sponsors.*” His founder/managing-partner role is independently corroborated on LinkedIn and SignalHire.

**What’s public vs. to-confirm.** The “~200 engagements / ~100 clients” figures are *self-reported*. Beyond the founder, the firm’s live roster, headcount, and size are not publicly detailed (the team page moved from /**leadership** to /**team**). Treat Creo as a small, founder-centric shop absent better data — and confirm bench depth and scale at the Discovery Meeting.

## 2.4 Clients and scale [Medium confidence]

Creo serves **PE sponsors, boards, and PE-backed portfolio companies**, with messaging aimed at the middle market. Named clients, revenue, headcount, and fee structures are not publicly disclosed — typical for a boutique, and natural Discovery topics.

# 3 Competitive Landscape

Creo sits inside the broader *PE value-creation / portfolio-operations consulting* category. Competition comes in three tiers, plus the PE firms’ own in-house operations teams.

## 3.1 Tier 1 — Operations-specialist value-creation boutiques (most direct) [High confidence]

**Maine Pointe.** A global supply-chain & operations consulting firm with private equity “at its core” (founded 2004; acquired by **SGS in 2023**). Its PE page claims it “*drives 10%–30%+ measurable cost improvement, accelerates revenue growth, and realizes capital efficiency gains*” and that it has “*delivered \$Billions of benefits to over 300 companies and 75 PE sponsors operating in 30 countries.*” This is the most precise scope-overlap with Creo’s operations practice — at materially larger scale.

**TBM Consulting Group.** Offers PE services in exactly three areas: *operational due diligence* (rapid current-state view of a target), *value creation* (diagnostic roadmaps targeting 20–30%+ EBITDA improvements), and *sell-side preparation*. It serves middle-market PE and cites 100+ GPs, 700+ portfolio companies, and \$2B+ EBITDA benefits since 2019.

All Tier-1 metrics are *self-reported, unaudited marketing statistics*. The strategic point stands regardless: firms in this tier occupy Creo’s exact operational-improvement niche at greater scale and with longer track records — which is exactly why a sharp wedge and provable outcomes matter for Creo.

## 3.2 Tier 2 — PE/strategy specialists (indirect) [High confidence]

**Grant Thornton | Stax.** A PE-focused management consulting firm (30+ years; founded 1994 by Rafi Musher; **Boston HQ**) acquired by **Grant Thornton Advisors LLC in September 2025** (announced 19 Aug 2025; ~300 employees). It offers a full deal-lifecycle suite: sector prioritization /

acquisition screening, commercial due diligence, value creation & growth strategy (post-close to pre-exit), data & analytics, and exit planning. **Stax is also Boston-based — a direct geographic overlap with Creo** — but now backed by a national accounting/advisory platform, giving it reach and cross-sell that a solo boutique competes against on focus and senior attention.

### 3.3 Tier 3 — The dominant incumbent / benchmark **[High confidence]**

**Bain & Company.** Describes itself as “*the world’s leading adviser to alternative investors,*” states it works with “*about 80% of the largest private equity firms in the world,*” and reports **6,500+ portfolio-company cases completed since 2000** (alongside 22,000 diligence projects). Its portfolio value-creation offering spans four pillars that fully overlap Creo’s strategy-to-execution scope:

1. Strategy & Exit Value Maximization
2. Growth & Pricing (commercial, marketing, CX, pricing excellence)
3. Margin Improvement (sustained cost and capital efficiency)
4. AI & Technology (Gen AI, advanced analytics, enterprise technology)

Bain is not a firm a boutique “beats” — it is the reference point against which boutiques position on cost, speed, senior-attention, and hands-on execution.

**Refuted overreach.** A circulating claim that Bain “played a pivotal role in more than half of \$500M-plus buyout transactions” was **[Refuted in verification]** (0–3) as a market-share overstatement. Bain is dominant, but not to that specific degree.

### 3.4 Tier 0 — In-house PE value-creation teams (the substitute)

PE value-creation teams (a.k.a. operations, portfolio-operations, or portfolio-resources teams) exist to make portfolio companies more valuable by lifting revenue and margins — “consulting, but with less planning and more doing.” Historically, **consultants recommend and operations teams implement**, though that line is now blurring as both PE operating partners and modern consultants do more hands-on execution. This in-house function is simultaneously Creo’s *buyer* (sponsors who hire it) and its *substitute* (sponsors who build the capability internally).

### 3.5 Competitive map at a glance

| Tier                    | Players                                                                                      | Relationship to Creo                       |
|-------------------------|----------------------------------------------------------------------------------------------|--------------------------------------------|
| Ops boutiques           | Maine Pointe, TBM                                                                            | Direct scope overlap; larger & more proven |
| PE/strategy specialists | Grant Thornton   Stax                                                                        | Same buyer, same city; now platform-backed |
| Incumbents              | Bain (also McKinsey, BCG, EY-Parthenon, Accenture, Oliver Wyman, A.D. Little, FTI, Deloitte) | Benchmark; full-scope; brand & scale       |
| In-house                | PE operations / operating-partner teams                                                      | Both customer and substitute               |

### 3.6 Industry recognition [Medium confidence]

Large firms dominate *The Consulting Report*’s “Top 25 Private Equity Consultants and Leaders of 2025” (Accenture, Oliver Wyman, Arthur D. Little, Kroll, OC&C, Grant Thornton | Stax, Riveron, dss+, Partners in Performance, Tech Mahindra, FTI, and others) — a reminder that for a boutique, recognition is built through niche authority and proprietary thought leadership rather than scale.

## 4 How the Industry Markets and Wins Clients

### 4.1 Consulting as a “credence good” [High confidence]

Economically, consulting expertise is a **credence good**: “a service where the seller knows more than the buyer about their problems and solutions” and where quality is “difficult or impossible to assess, even after purchase.” Because clients cannot objectively verify the work even in hindsight, **the main drivers of competitiveness are neither price nor measurable quality, but experience-based trust and networked reputation.**

### 4.2 What this implies for go-to-market

- **Sponsor relationships are the channel.** Work flows from repeat PE-sponsor relationships and warm introductions, not open RFPs. A partner who is trusted by a fund gets pulled into multiple portfolio companies.
- **Referrals and track record compound.** Reputation is “networked” — one successful engagement seeds the next via word of mouth among a tight community of operating partners and management teams.
- **Senior credibility sells.** Buyers underwrite the individual. A founder with a recognizable pedigree (AlixPartners, Parthenon, etc.) *is* the marketing asset.
- **Thought leadership scales the larger firms.** Bain, McKinsey, Simon-Kucher, KPMG, and Stax publish proprietary surveys and reports that both generate leads and reinforce authority — a motion a boutique can run at its own scale.

- **Productized diagnostics lower buyer risk.** Naming and packaging a methodology (Maine Pointe’s measurable-savings framing; TBM’s three-phase model) gives risk-averse buyers a legible way to “trust” an unverifiable service.

## 5 What Wins: Competitive Advantages in This Market

### 5.1 The market has shifted to operations and execution [High confidence]

The structural tailwind behind Creo’s category is the move from financial engineering toward **operational value creation**:

- Operational improvement is the **single most-cited value lever** — prioritized by **33%** of deal teams and operating partners, nearly double the next lever (Buy & Build at **20%**).
- **78%** of respondents expect operational improvement to grow in importance over the next 12 months — a **20% year-over-year increase**.
- Corroborated directionally by Bain, McKinsey (top-quartile funds derive ~39% of returns from revenue/margin gains), and KPMG.

### 5.2 Execution capability is the differentiator [Medium confidence]

Within operations, *doing* beats *advising*:

- **67%** of value-creation initiative failures stem from *controllable* factors.
- **53%** cite *poor implementation / execution* — “the strategy was fine, but the execution engine wasn’t there.”
- McKinsey: “disciplined execution and operational improvement have become the true differentiators.” Bain: operational skill is “the key differentiator of PE manager performance.”

**The implication for Creo.** “Strategy-to-execution” is exactly the right wedge — *and* it is the near-universal industry claim. That makes genuine, *demonstrable* execution capability the real edge: the winners prove execution with verifiable outcomes. Building 2–3 quantified case studies is therefore one of the highest-leverage moves available.

### 5.3 How boutiques actually out-compete the giants

When boutiques win against Bain-tier incumbents, it is typically on:

- **Senior attention** — partners do the work, not a leveraged pyramid of junior staff.
- **Cost and speed** — lower overhead, faster mobilization, no multi-month staffing ramp.
- **Specialization** — deep focus on a sector, deal size, or functional problem the generalist giant treats as one of hundreds.
- **Hands-on implementation** — staying through delivery rather than handing off a deck.

## 6 How Creo Is Positioned — and Where the Opportunities Are

### 6.1 The intended position

Creo aims for the sweet spot: **strategy-through-execution for PE-backed middle-market portfolio companies**, spanning all four EBITDA levers. On paper this aligns precisely with where

demand is structurally growing (operations + execution), and the founder’s turnaround pedigree lends real credibility.

## 6.2 The opportunities to substantiate and sharpen the position

The positioning is *credible and well-aimed*; the upside is in making it *legible and provable* to a risk-averse buyer:

- **Surface the bench.** Beyond the founder, the public team picture is thin (the team page moved from `/leadership` to `/team`). Making the full senior bench visible reduces single-person dependence and strengthens the trust story.
- **Make proof public.** Quantified client outcomes and case studies are not currently published; building and surfacing 2–3 is the single best way to de-risk the credence good.
- **Name the method.** The “idea-to-implementation, lasting- capabilities” message is shared by many peers; turning it into a *named, productized* methodology makes it a distinctive, legible trust object.

The positioning is well-aimed; the concrete wedge — which sector, which deal size (lower-middle vs. middle market), what specific speed/cost advantage versus Bain-tier or versus Boston-neighbor Stax — is the thing to sharpen and prove. That sharpening is exactly what the marketing plan is built to do.

## 7 Moats: Creo’s Foundation and How to Harden It

### 7.1 The moat the industry really offers [High confidence]

In a credence-good market, the defensible asset is **experience-based trust and networked reputation**. For a boutique, that centers on the **founder’s personal reputation and relationships**. For Creo, that means Rich Vitaro’s pedigree and his book of sponsor relationships — a genuine, top-tier foundation.

### 7.2 Why a founder-only moat is fragile by default

- **Non-transferable.** A reputation moat lives in one person; it is strengthened by spreading it across several credible partners.
- **Non-scalable on its own.** Trust is earned one relationship at a time; productized IP and proprietary benchmarks make it compound.
- **Common narrative.** Many similarly-pedigreed boutiques tell the “ex-AlixPartners/Parthenon partner, hands-on execution” story — so proof and specialization are what differentiate.

### 7.3 The hardening opportunity [Medium confidence]

The premium-valuation playbook in advisory — firms commanding exceptional multiples — rests on **productized / proprietary IP and recurring, subscription-style relationships** rather than project-by-project work. (Note: a specific “14–16x EBITDA” framing of this thesis was **[Refuted in verification]** as overstated, 1–2 — but the structural point, that IP and recurring revenue beat project work, holds.) Building toward either — a named methodology, a benchmark data asset, or recurring portfolio relationships — is the path from a strong founder’s shop to a durable firm.

**Moat read.** Creo is a well-positioned, well-pedigreed boutique riding a real tailwind. Its current defensibility is founder reputation — the classic boutique foundation — and the strategic opportunity is to harden it into a bundle (specialization depth, multi-partner reputation, named methodology + benchmarks, provable outcomes, and embedded sponsor relationships). The encouraging part: every element is buildable at boutique scale, and several are about restarting or surfacing assets Creo already has.

## 8 Full Market Rundown: The PE Value-Creation Consulting Industry

### 8.1 Structure of the value-creation stack

PE returns come from three levers: **multiple expansion**, **deleveraging**, and **EBITDA/operational growth**. As cheap leverage and reliable multiple expansion have faded, the **operational lever** has become the decisive one — and that is precisely the lever value-creation consultants (and in-house operations teams) own.

### 8.2 Demand dynamics

- **Operations is now the dominant, fastest-growing lever** (33% prioritization; 78% expecting further growth). The structural shift is well-corroborated across Bain, McKinsey, KPMG, and Simon-Kucher.
- **Execution gaps drive failure** (67% controllable; 53% poor implementation), so buyers increasingly want *implementation*, not just recommendations.
- **Lower-/middle-market professionalization** expands the buyer pool: smaller portfolio companies that historically lacked sophisticated operating functions now hire external help to build them.

### 8.3 Supply-side: consolidation in motion

The competitive landscape is **actively consolidating**, which reshapes the field around Creo:

- **Stax → Grant Thornton** (closed Sept 2025): a PE specialist absorbed into a national platform.
- **Maine Pointe → SGS** (2023): an ops boutique acquired by a global testing/inspection group.

Both moves give former boutiques platform scale, cross-sell, and brand — widening the gap between “boutique with a platform behind it” and “solo boutique,” and raising the value of a sharply differentiated, focused position.

## 8.4 Competitive forces summary (Porter-style)

| Force          | Read for a firm like Creo                                                                                                                                              |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Rivalry        | <b>High</b> — many pedigreed boutiques + scaled specialists + incumbents, similar messaging                                                                            |
| Buyer power    | <b>High</b> — sophisticated PE buyers; can build in-house or play firms off each other                                                                                 |
| Substitutes    | <b>High</b> — in-house operating-partner / portfolio-ops teams                                                                                                         |
| New entrants   | <b>High</b> — low capital barriers; any senior partner can hang a shingle                                                                                              |
| Supplier power | <b>Low/Medium</b> — talent is the input; senior operators are scarce and mobile                                                                                        |
| Net            | A structurally attractive <i>demand</i> environment in a competitive supply environment. Tailwinds are real; the winners differentiate on focus, proof, and authority. |

## 9 Caveats, Source Quality, and Limitations

1. **Creo-specific facts are largely self-reported.** Service lines, target market, and the “~200 engagements / ~100 clients” figure come from the firm’s own site and a 2022 self-issued press release — fine for descriptive profile, not independently audited. The team page was relocated (old /[leadership](#) URL 404s), so the live roster and headcount are best confirmed at Discovery; only founder Rich Vitaro is publicly verified.
2. **Competitor scale metrics are unaudited marketing.** Maine Pointe (300+ companies / 75 PE firms), TBM (\$2B+ EBITDA), and Bain (6,500+ cases / ~80% of top PE firms) are self-reported.
3. **Market-trend statistics lean on one vendor study.** The 33%/20%, 78%, and 67%/53% figures derive substantially from a single Simon-Kucher study (Sept 2025) that sells these services and discloses no sample size; the 33%/20% split is from an Industrials/Business-Services subset generalized to PE broadly. The *direction* of travel is well-corroborated; the precise numbers are not.
4. **Landscape is time-sensitive.** Active consolidation (Stax/GT 2025, Maine Pointe/SGS 2023) means the competitive set may shift further.
5. **No public data on Creo’s size.** Revenue, headcount, client roster, and fee structure are not public — natural Discovery topics.

## 10 Open Questions for the Discovery Meeting

1. **Actual size and trajectory?** Headcount, number of MDs/professionals, revenue, and growth — the publicly verified roster is just the founder.
2. **Named clients and BD model?** Which sponsors, which portfolio companies, what win-rate and referral mechanics?

3. **Which proof points can we use?** Quantified outcomes and case studies that can be published to de-risk the sale.
4. **What is the intended wedge?** Sector specialization? Lower-middle vs. middle market? The speed/cost advantage to lead with versus Bain-tier and versus Boston-neighbor Stax?

## 11 Marketing & Go-to-Market Intelligence (second research pass — added 2 June 2026)

**Why this part exists.** Everything above assesses Creo's competitive *position*. This part adds the *marketing*-specific intelligence the team needs to build Creo's marketing plan: Creo's current marketing footprint, the lead-generation playbooks competitors actually run, the 2026 demand backdrop, and the gaps only the client Discovery Meeting and primary research can close. Drawn from a second cited research pass (5 angles, 22 sources fetched, 25 claims verified — 22 confirmed / 3 refuted).

### 11.1 Creo's current marketing footprint — baseline and the easy wins [High confidence]

Creo's public marketing is **real, with clear and achievable upgrades** — which is good news for a marketing engagement: the high-impact wins are obvious.

- **Positioning is clear.** The site (built on Wix) carries a consistent value-creation / “*peak performance*” message — “*Superior Outcomes, Lasting Capabilities, Exemplary Service*” — across the four service lines (Strategy, Growth, Operations, Human Capital; “Operations” is the current label for what 2022 materials called “Supply Chain”).
- **Founder credibility is the hook — and is under-told.** Rich Vitaro is marketed via an experience claim (~200 engagements / ~100 clients, “trusted partner”). The on-site bio omits his prior firms and education, leaving the AlixPartners/Parthenon pedigree — his strongest marketing asset — on the table. *Opportunity: tell the full pedigree story.*
- **Conversion upside.** The current calls-to-action are a generic “Contact us,” a phone number, and an email. *Opportunity: add a lead-capture form, a “book a call,” and a gated download on the insights pages.*
- **Thought leadership to revive.** The News/Insights hub holds ~6–7 pieces dated **Nov 2021 to Nov 2023**. *Opportunity: restart a regular cadence; add case studies and testimonials.*
- **Discoverability to fix.** The Wix site returned HTTP 404 to our automated crawlers (we read it via the Wayback Machine and a `/the-creo-advisors-team/` mirror). *Opportunity: confirm crawlability on the live front-end and improve SEO so search can find it.*

### 11.2 The single biggest opportunity: revive a playbook Creo already ran [High confidence]

The most important marketing finding is that **Creo has already proven it can run a survey-driven thought-leadership engine** — it has simply let it lapse. In 2022 Creo *commissioned and published its own primary research* — a survey of **250+ executives at \$100M+ revenue companies** — and distributed it via PRNewswire (syndicated to Yahoo Finance), with a companion “CEO Survey” PDF. Founder Vitaro also posts research-driven LinkedIn content mapped to all four service lines (including a post citing a “Creo survey of 150+ dealmakers”). The motion is in the

firm’s DNA; it just paused in late 2023. “**Revive and systematize what you already did**” is a far more credible recommendation than “build a content engine from scratch.”

### 11.3 Competitor lead-generation playbooks worth emulating [High confidence]

Direct competitors run a consistent, *adaptable* playbook. None of it requires Bain’s budget — each has a boutique-scale version.

| Firm                | The play (verified)                                                                                                                                                                                                                   | Creo-scale adaptation                                                                                                                     |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| Maine Pointe        | Trademarked named method — <i>Total Value Optimization™</i> — led by quantified outcomes (10–30%+ cost improvement, 6:1 avg ROI, \$5B+ value created).                                                                                | Name/package one signature diagnostic; lead with whatever quantified outcomes Creo can substantiate (confirm what’s usable at Discovery). |
| TBM Consulting      | Central content hub (articles, blogs, eBooks, infographics, videos/podcasts) filterable by <i>solution AND industry</i> , plus a dedicated Case Studies section and a named “PE Operational Due Diligence + Value Creation” offering. | One organized Insights hub indexed by service line + sector; a named PE offering page; even 2–3 short case studies.                       |
| Bain & Co.          | A <i>report</i> → <i>webinar</i> → <i>consultant</i> funnel: the annual Global PE Report feeds a dedicated webinar, cross-links case studies, and stacks three lead-capture CTAs (register / contact / subscribe).                    | A small annual Creo survey report → LinkedIn amplification → a short webinar/roundtable → “book a call,” with real lead capture on-site.  |
| Grant Thornton Stax | Productized, named offerings across the <i>full deal lifecycle</i> (sector prioritization, CDD, value creation, exit planning); CDD sold on “speed, transparency, collaboration.”                                                     | Name Creo’s offerings by deal stage; lead with boutique speed + senior attention as the wedge versus platform-backed firms.               |

### 11.4 2026 demand backdrop — fresh data for the “why now” [High confidence]

New 2026 sources strengthen the demand thesis from §5 and §8 with current numbers:

- **Bain Global PE Report 2026** — “**12 is the new 5.**” With multiple expansion gone and 8–9% borrowing costs, a deal now needs **~10–12% annual EBITDA growth** to hit target returns, versus **~5%** in the 2010s. Bain’s prescription: “the winning firms will build *systems*, not slogans ... and move ... to execution on Day 1.”
- **Simon-Kucher PE Value Creation Study 2025.** Operational improvement is the single most-cited value lever (**33%**, nearly double Buy & Build at 20% — in the Industrials &

Business-Services subset, so cite with that qualifier), and **~2/3 of value-creation failures are controllable** (poor implementation 53%, PortCo resistance 35%).

*Source-bias note:* the loudest “operations matters more” voices (Bain, Simon-Kucher, McKinsey) are themselves value-creation consultancies. Treat these as *attributed thought-leadership* signals, not independent fact — but they are exactly the tailwind Creo’s marketing should ride.

## 11.5 Gaps this pass did *not* close

Two of the four research areas came back short:

- **[Refuted in verification] Market sizing (no dollar TAM/SAM).** No defensible dollar figure for the PE value-creation / portfolio-operations consulting market survived verification. Starting points for a separate sizing pass: global management-consulting market reports (e.g., Mordor Intelligence) and the often-cited ~\$541B global management-consulting figure — then triangulate (PE AUM × advisory-spend assumptions, or consulting market × PE share) and *state every assumption*.
- **Buyer journey (supply side only).** The pass confirmed how advisors *market*, but not how PE buyers actually *discover and choose* advisors — channels, triggers (new platform vs. under-performance), and decision criteria. That is precisely what the Discovery Meeting and primary interviews are for.

**Marketing-plan implications (the “so what”).** The plan almost writes its own spine: (1) revive and systematize Creo’s lapsed survey-driven thought-leadership motion on a regular cadence; (2) productize a *named* signature diagnostic and attach quantified proof points + 2–3 case studies (pending what Discovery clears for use); (3) fix the foundation — a crawlable site and real lead capture (form / “book a call”); (4) run a boutique-scale *report* → *LinkedIn* → *webinar* → *call* funnel; and (5) ride the 2026 operations/execution tailwind in the messaging. Every move is competitor-proven and realistic for a small firm — and several simply restart things Creo once did.

## Marketing-pass verified findings (provenance)

| Finding                                                                                             | Confidence Vote |           |
|-----------------------------------------------------------------------------------------------------|-----------------|-----------|
| Creo site: clear value-creation positioning + 4 lines; Wix 404s-to-bots (SEO upside)                | High            | 3–0 / 2–1 |
| Founder marketed via ~200/~100 hook; bio omits pedigree; basic CTA                                  | High            | 3–0 / 2–1 |
| Insights hub paused (Nov 2021–Nov 2023); room for case studies/testimonials                         | High            | 3–0       |
| Creo already ran survey-based TL (250+ exec survey, 2022 PRNewswire; Vitaro LinkedIn) — now dormant | High            | 3–0       |
| TBM: multi-format content hub by solution + industry; named PE offering                             | High            | 3–0       |
| Maine Pointe: trademarked TVO™ + quantified outcomes (10–30%+, 6:1, \$5B+)                          | High            | 3–0       |
| Stax: productized deal-lifecycle offerings; CDD on speed/transparency                               | High            | 3–0       |

| Finding                                                                                    | Confidence Vote |     |
|--------------------------------------------------------------------------------------------|-----------------|-----|
| Bain: report→webinar→consultant funnel w/ stacked lead-capture CTAs                        | High            | 3–0 |
| Bain 2026 “12 is the new 5” demand thesis (~10–12% vs ~5% EBITDA growth)                   | High            | 3–0 |
| Simon-Kucher: ops most-cited lever (33% vs 20%, sector subset); ~2/3 failures controllable | High            | 3–0 |

**Refuted this pass (do not use):** Creo publishes content under four service categories (0–3); Stax markets on “30+ years experience” as primary trust signal (1–2); Stax uses “extension of your team” as core GTM framing (1–2).

## 12 Appendix A — Verified Findings Ledger

| Finding                                                                                  | Confidence | Vote |
|------------------------------------------------------------------------------------------|------------|------|
| Creo: Boston-area boutique, founded 2019, four service lines, PE/board/management buyers | High       | 3–0  |
| Founded & led by Rich Vitaro; ~200 engagements / ~100 clients (self-reported)            | High       | 3–0  |
| Ops-boutique rivals: Maine Pointe (SGS 2023) & TBM Consulting                            | High       | 3–0  |

| Finding                                                                                 | Confidence | Vote      |
|-----------------------------------------------------------------------------------------|------------|-----------|
| Indirect rival: Grant Thornton   Stax (Boston; GT acq. Sept 2025)                       | High       | 3-0       |
| Incumbent benchmark: Bain (~80% of top PE; 6,500+ cases)                                | High       | 3-0       |
| Operations is the dominant/fastest-growing value lever (33% vs. 20%; 78% expect growth) | High       | 3-0 / 2-1 |
| Execution is the key differentiator (67% controllable, 53% poor implementation)         | Medium     | 2-1       |
| In-house value-creation teams = the EBITDA-lever function boutiques augment/replace     | High       | 3-0 / 2-1 |
| Consulting is a credence good; trust/reputation is the central defensible trait         | Medium     | 3-0       |

### Refuted claims (did *not* survive verification)

- Bain “pivotal role in >half of \$500M+ buyouts since 2000” — **0-3**.
- “14-16x EBITDA via productized IP / subscription advisory” valuation framing — **1-2**.
- A defensible dollar TAM/SAM for the PE value-creation consulting market — **not established**.
